

Welcome to today's webinar:

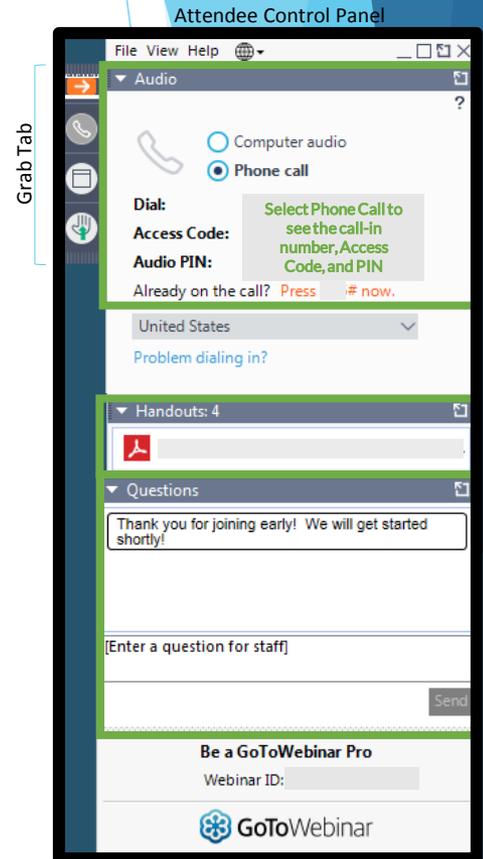

WESTAR-WRAP Air Quality Data and Decision Support Systems at Colorado State University / Cooperative Institute for Research in the Atmosphere

- The presentations are available in the **Handouts** pane of your control panel.
- Attendees may submit written questions through the **Questions** pane or **Chat** box on the control panel. You may also **Raise your hand** using the hand icon on the grab tab to be unmuted to ask your question.
- If you do not have a microphone for your computer and would like to ask your question, you may select “Phone Call” in your audio pane for a call-in number, access code, and audio pin #. Once the organizer unmutes your line, you will have the ability to mute/unmute yourself using the microphone button on the grab tab.

WRAP Contact: Tom Moore, tmoore@westar.org

ITEP Contact: Mehrdad Khatibi, Mehrdad.Khatibi@nau.edu

This webinar is being recorded.

Emma Ruppell, Air Quality & Meteorology Specialist,
Bishop Paiute Tribe and WRAP Tribal Data Work Group
Co-chair

- ▶ Emma has served since 2015 as staff of BPT's Air Program, which operates 2 continuous FEM particulate monitors, a continuous calibrated ozone monitor, and a meteorological station, outputs real-time data to the public, provides backyard burn permits, and works with other Tribal programs, departments, and neighboring Tribes and local/state/federal partners on projects to protect and improve air quality. She has background in earth and geospatial sciences, environmental monitoring and data collection, pollution controls, and regulatory topics.
- ▶ Email: emma.ruppell@bishoppaiute.org

Webinar Overview

- ▶ **Demonstration of WRAP Tribal Data map elements:** *Emma Ruppell*, 10 mins <https://www.wrapair2.org/>

- ▶ **Intro to the CIRA Air Data Management System:** *Shawn McClure*, 45 mins

Shawn McClure, Software Engineer and P.I. Intermountain West Data Warehouse, CIRA, Colorado State University

- ▶ Shawn is a software engineer for the Cooperative Institute for Research in the Atmosphere at Colorado State University and the P.I. of the Intermountain West Data Warehouse and the WRAP Technical Support System, which provide online access to monitored air quality data, gridded modeling products, and emissions data to help assess air quality in the Intermountain West. Shawn has been with CIRA/CSU for 17 years and has developed an extensive system of database, software, and website components to help researchers and planners explore and analyze a wide variety of air quality data via an integrated suite of tools.
- ▶ Email: Shawn.McClure@colostate.edu

ITEP Webinar

December 4th, 2019 10:30 a.m. (PDT)

Shawn McClure, CSU-CIRA

- **Overview of the CIRA Air Data Management System** (~10 minutes)
 - Database framework
 - Web framework
 - Software framework
 - Hardware framework
 - Architectural Details
 - Web ecosystem (websites that leverage the CIRA ADMS)
- **Tour of selected web tools** (~25 minutes)
 - Federal Land Manager Environmental Database (FED)
 - WRAP Technical Support System (TSS)
 - Intermountain West Data Warehouse (IWDW)
- **Summary** (~10 minutes)
 - Short term roadmap
 - Registered users
 - Website traffic
 - Links and contacts
 - Questions

Database

- Import/Update
- Management
- Administration
- Dissemination

Relational Database:

- Over 1 billion records
- 62 air quality monitoring networks
- 5 dozen water quality projects
- 24 modeling and satellite datasets
- 15 emissions inventories

Data Warehouse:

- 250+ TB of online files
- 120+ TB of offline files
- 400+ TB downloaded/transferred
- 500 TB current storage capacity
- 12 modeling platforms/scenarios

CIRA Air Data Manager

Software

Monitoring Datasets:

- IMPROVE (and special studies)
- IMPROVE RHR and Impairment
- AQS (Most of the available datasets)
- CASTNET (Dry deposition, O₃)
- NADP (NTN, AIRMoN, MDN, Derived)
- USFS Water Quality
- more...

Websites:

- IWDW
- WRAP TSS
- FED
- IMPROVE
- SEMAP
- NASA ROSES
- VIEWS

Management System

Hardware

Software

Database

Web

Management System

Code base:

- Microsoft .NET Framework
- Custom query management framework
- Custom data visualization framework
- Custom air quality analysis libraries
- Optimized graphics generation library
- Parameterized chart customization API

Specialized Tools:

- ESRI ArcGIS
- Interactive Data Language (IDL)
- Statistical Analysis System (SAS)
- MATLAB
- Mathematica
- ENVI

Software

- Data access libraries
- Data transformation tools
- Web delivery framework
- Data analysis tools

Database

Web

CIRA Air Data Management System

Hardware

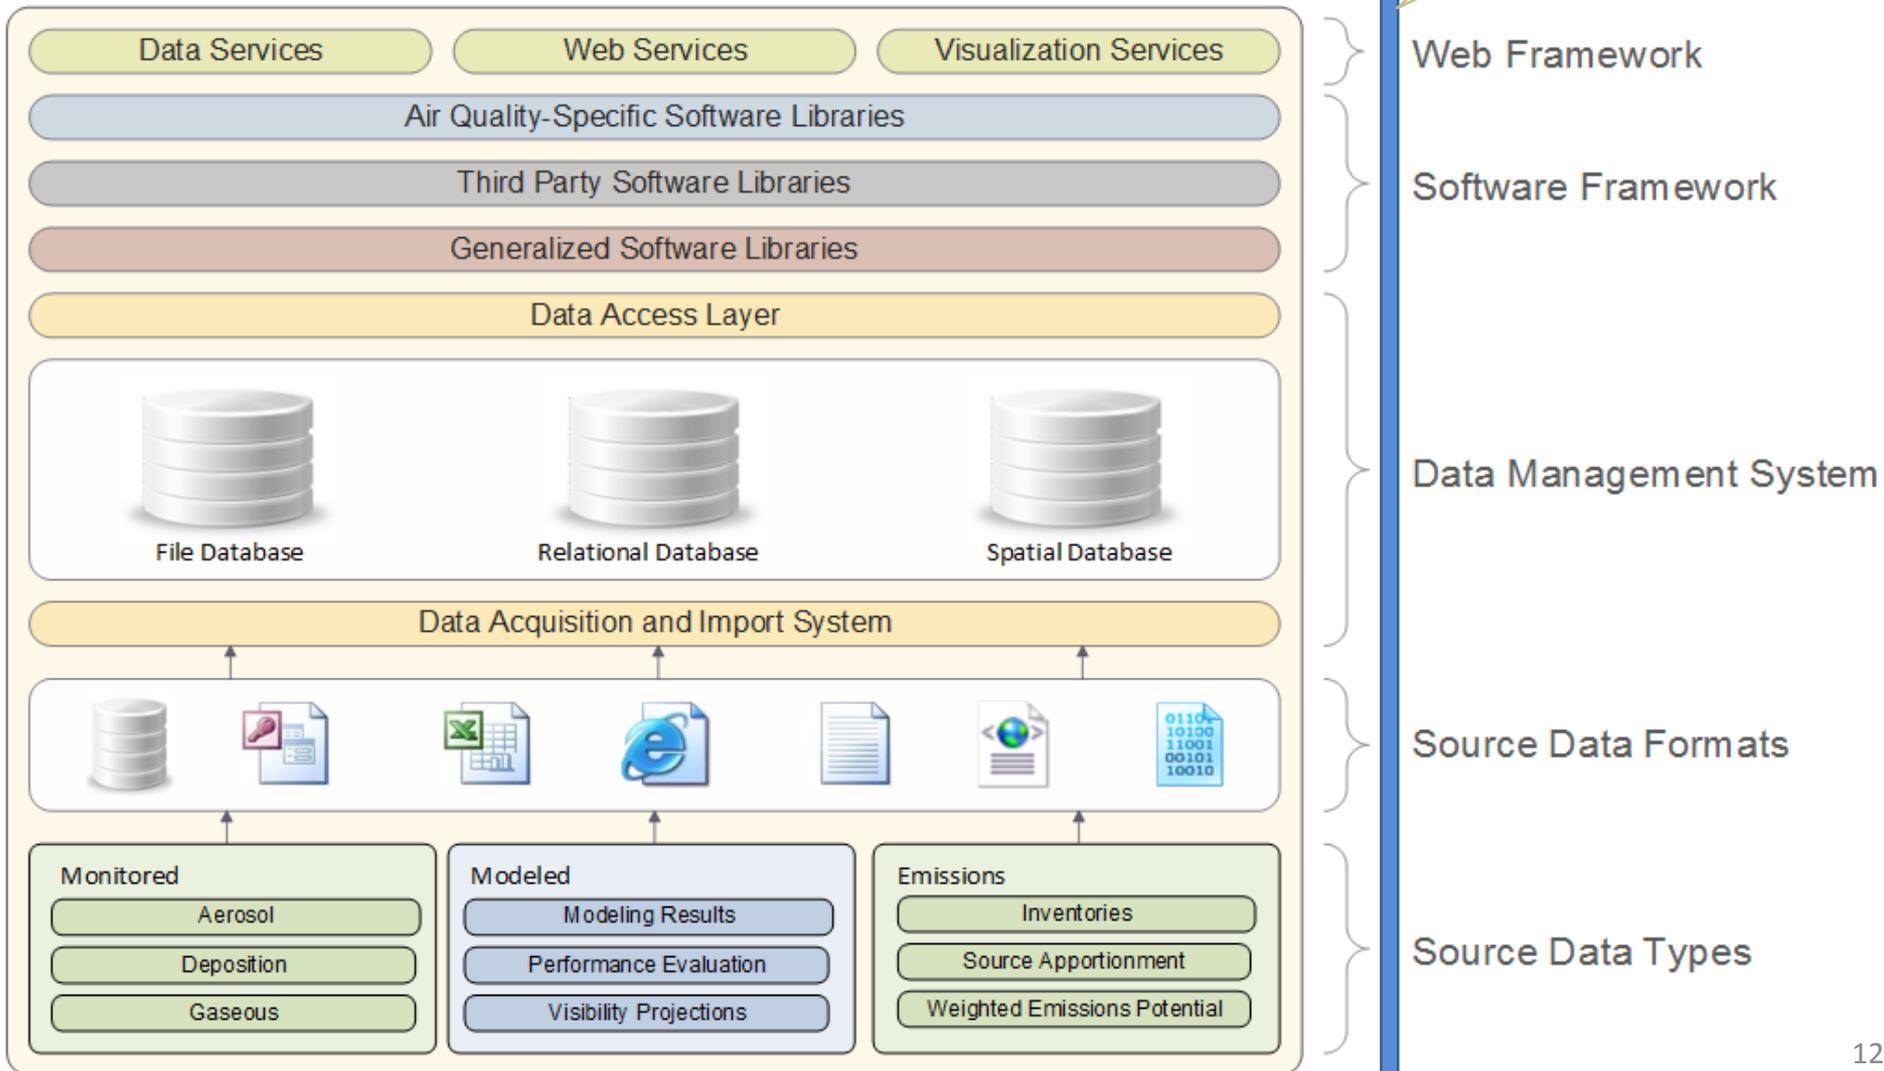

- Server configuration
- Server maintenance
- Networking
- Troubleshooting & repair

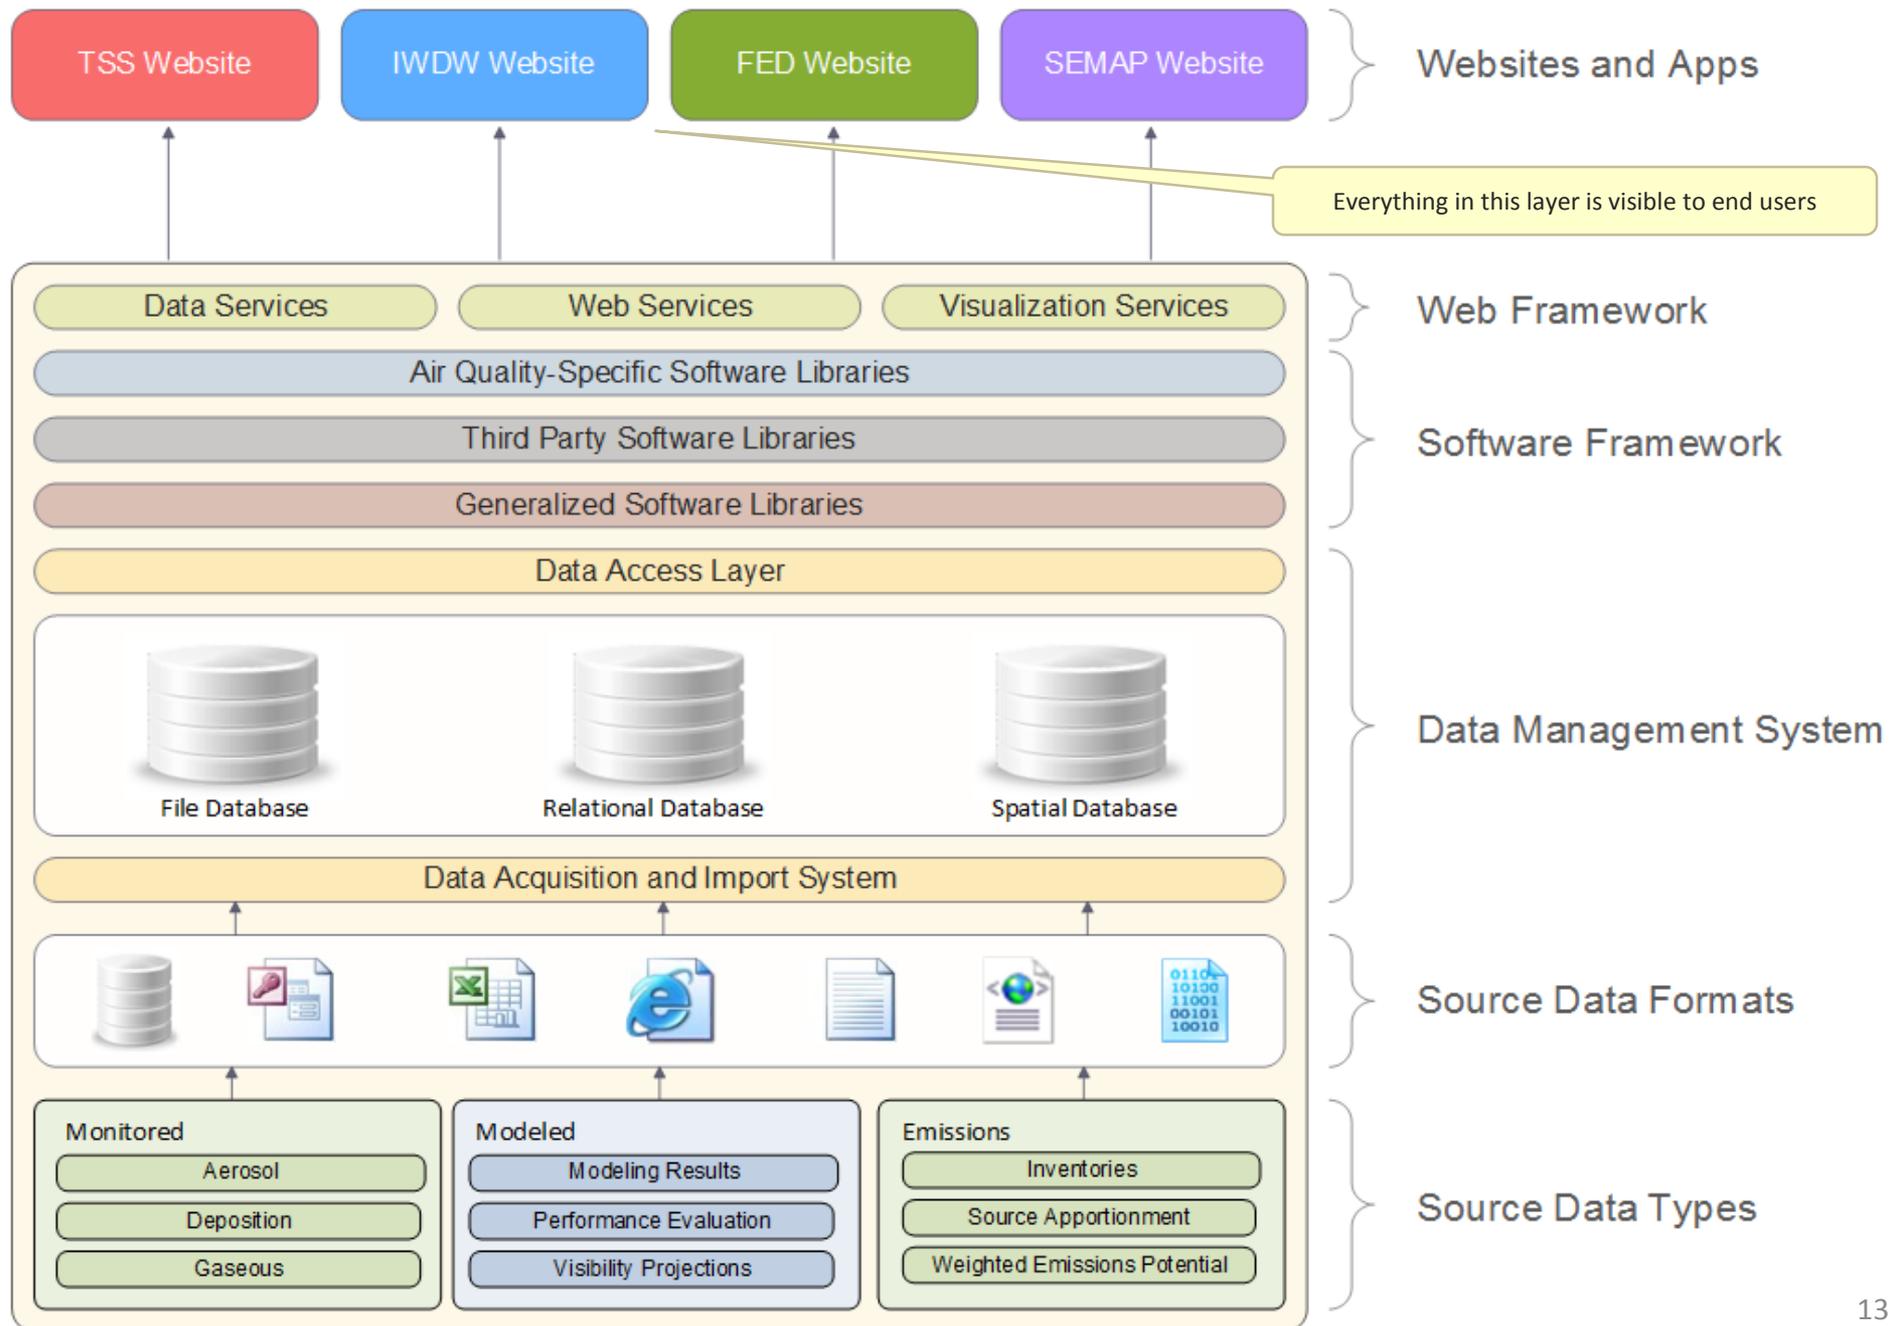

Physical Infrastructure:

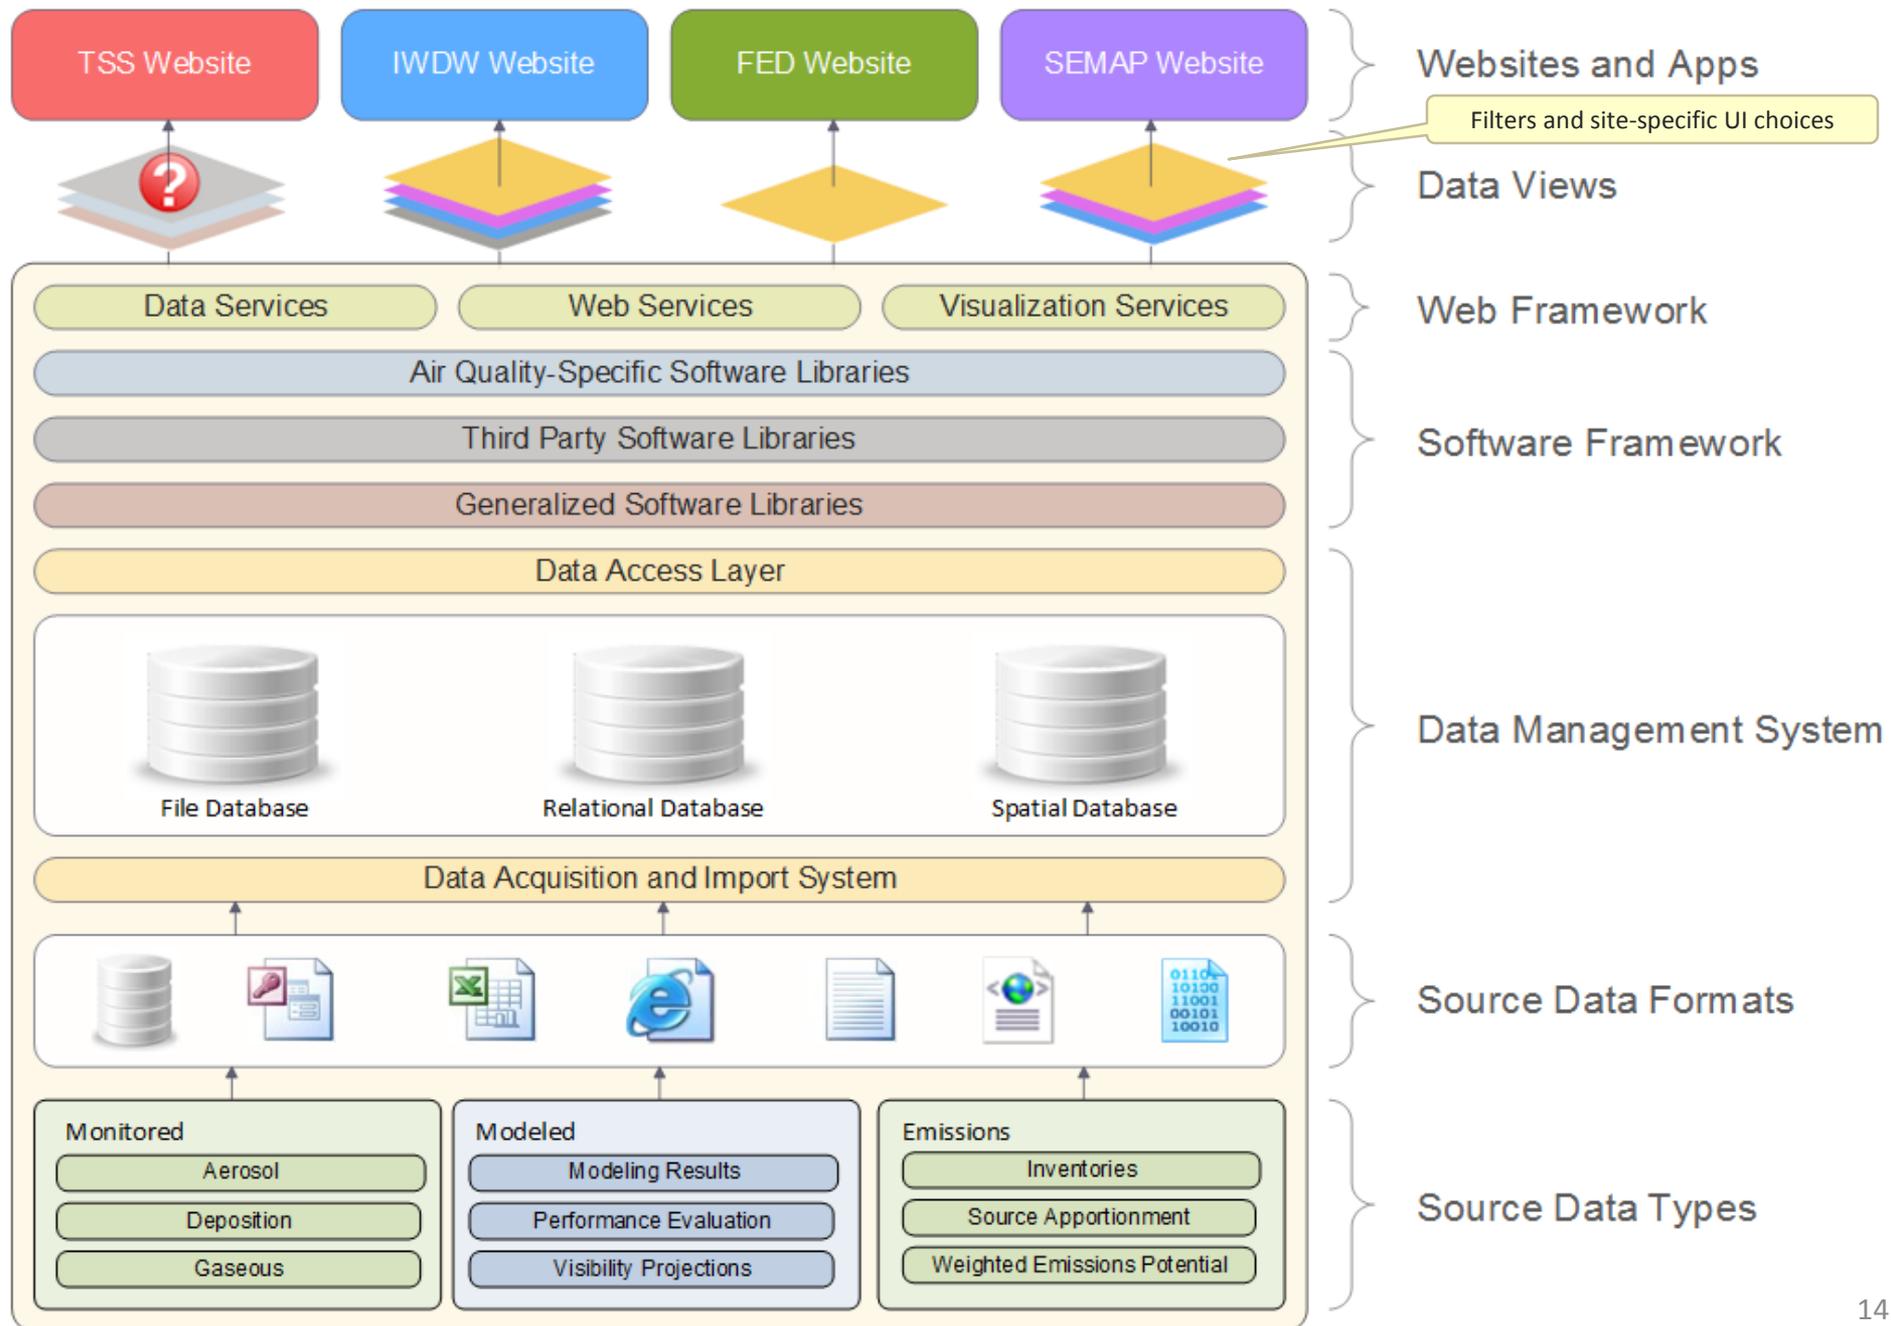

- Fifteen Windows servers
- Three 8U Linux file servers
- Onsite sys-admin and service
- 99.9% Internet up-time
- University-sized fiber optic Internet “pipe”
- Internal data throughput of +1000 GB/s

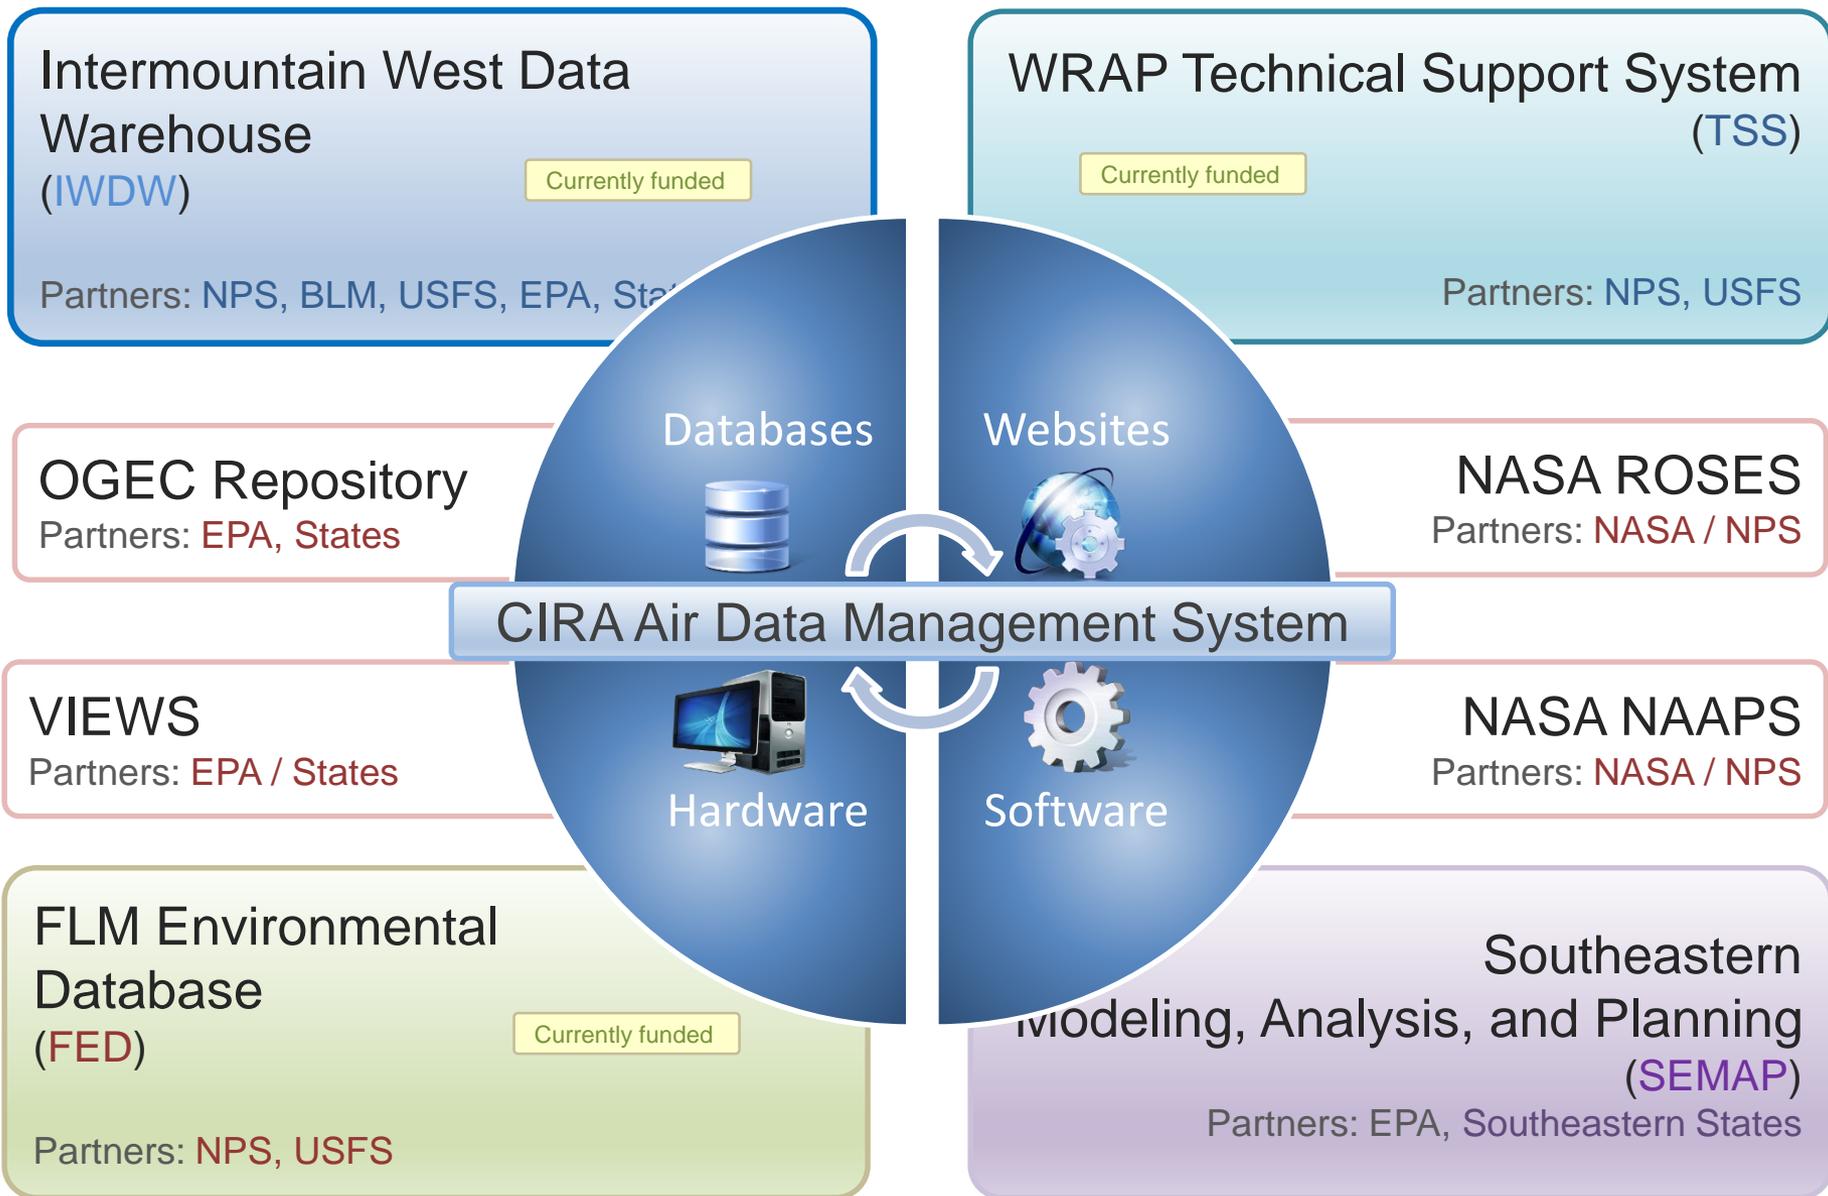

Everything in this box is generally invisible to most end users

General direction of data flow

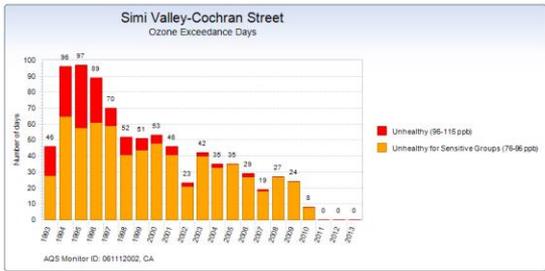

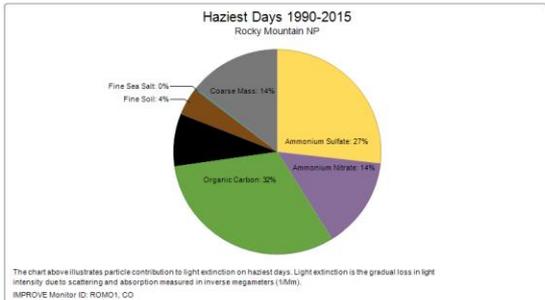

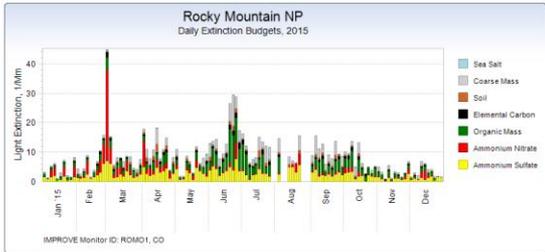

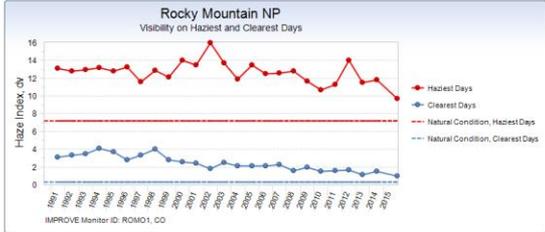

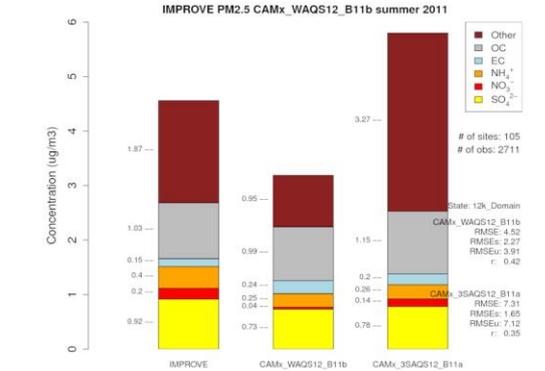

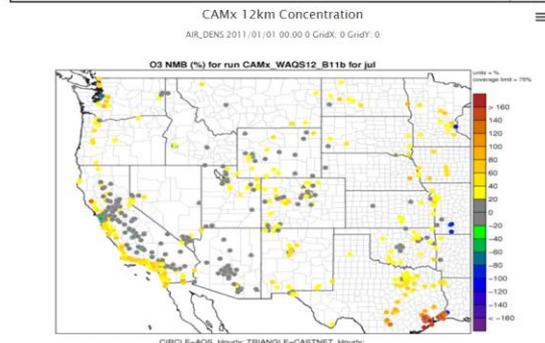

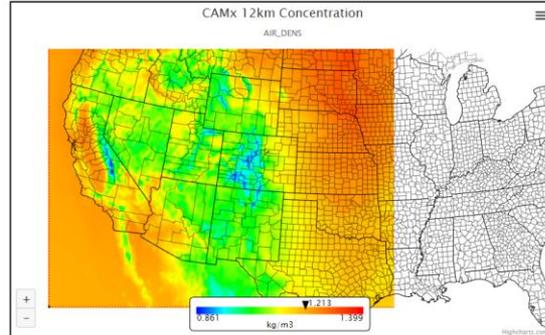

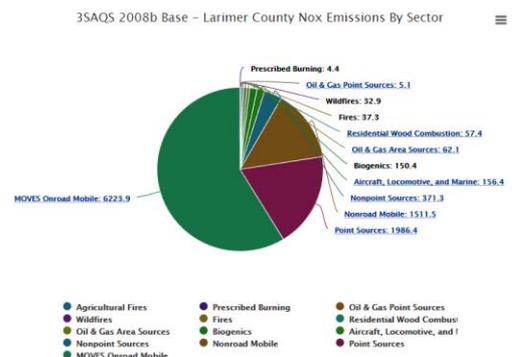

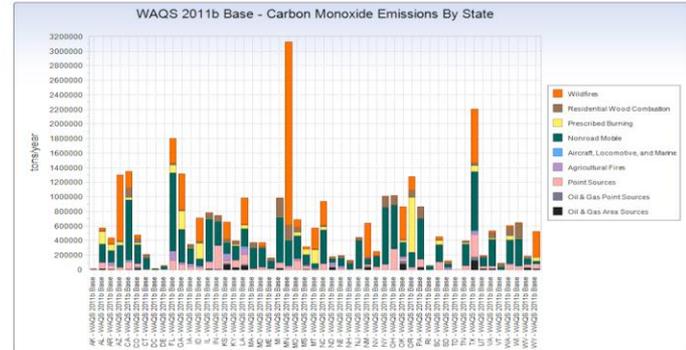

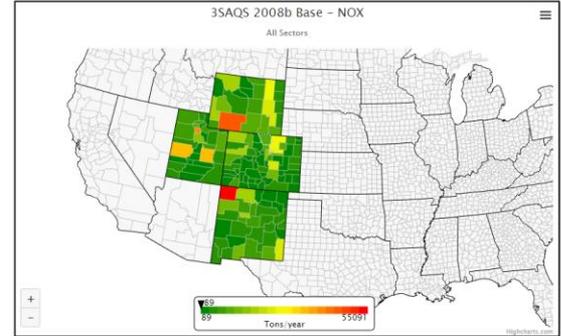

Monitored

Modeled

Emissions

Bulk Data

Request Modeling Platform Data

Submit a request for IWDW modeling data by selecting modeling platform components and describing your intended use of the data.

Get Monitoring Data

Use the Database Query Wizard to selectively download data and metadata from the integrated monitoring database by specifying datasets, sites, parameters, date ranges, and other criteria.

Monitoring Data Tools

Visibility Summary

View line and bar charts of deciview trends and aerosol haze budgets on the clearest and haziest days based on data from the IMPROVE Aerosol monitoring network.

Ozone Summary

View line and bar charts of the 4th Highest 8-Hour Daily Ozone Average, the W126 Exposure Index, and the SUM06 Exposure Index based on data from the EPA's Air Quality System (AQS).

Wet Deposition Summary

View line and bar charts of wet nitrate, wet ammonium, and wet sulfate trends and composition based on data from the National Atmospheric Deposition Program (NADP).

Dry Deposition Summary

View line and bar charts of dry nitric acid, ammonium, nitrate, and sulfate trends and composition based on data from the EPA's Clean Air Status and Trends Network (CASTNet).

Modeling Data

Modeling Studies

View a high level listing of modeling studies housed in the Data Warehouse.

Modeling Platforms

View 3SAQS/WAQS modeling platform. File browser allows file level examination of platform components. Listing include platform components for the 2008b, 2011a, and 2011b modeling platforms.

Reference Documentation

Data Documents

View a list of key documents that describe the modeling platforms and monitoring data supported by the warehouse.

Project Documents

Links to documents that describe the IWDW-WAQS Project, including objectives and policies. Access is restricted to IWDW-WAQS Project Cooperators.

Literature

Publications relevant to emissions inventories and air quality studies in the Intermountain West.

Modeling Data Tools

Model Performance Evaluation Plots

View a wide variety of scatter plots, soccer plots, bar charts, and maps demonstrating model performance for several modeling scenarios in the Three-State Air Quality Study (3SAQS).

Model-To-Observation Comparison Tool

View network-wide and site-specific time series charts of modeled and observed parameters from several different air quality monitoring networks in the Intermountain West region.

Source Apportionment Visualization Tools and Resources

Links to Visualization Tools for 2008b, 2011a and 2011b based Source Apportionment tools; Source Apportionment data download and documentation.

Emissions Data Tools

Emissions Review Tool

View charts and graphs of annual emissions totals for States, Counties, and Source Classification Codes (SCCs) from several different 3SAQS modeling scenarios.

Emissions Review Map

View spatial display of annual emissions totals for States, Counties, and Source Classification Codes (SCCs) from several different WAQS modeling scenarios.

Metadata Tools

Monitoring Site Browser

View the locations of monitoring sites and explore monitoring site metadata for all the available monitoring networks in the IWDW database using an interactive map.

Community and Support

Forums

Review announcements, ask questions, have discussions, and browse topics and threads relevant to data warehouse contents and operations.

Wiki

Browse a growing repository of supporting documentation and information regarding modeling platforms, modeling protocols, air quality studies, projects, procedures, and processes that are relevant to the warehouse.

Updates

View a list of dated updates to modeling data components, warehouse wiki pages, and study documents

Purpose:

To enable the fine-grained selection and download of raw air quality data by allowing the user to select sites, parameters, dates, aggregations, data fields, and output options. Data can be output to a variety of file formats, including CSV, Microsoft Excel, and HTML.

This tool is also available on the IWDW and TSS.

Example:

In this example the user has selected the IMPROVE Aerosol dataset, the IMPROVE monitoring site at Acadia National Park, several pollutants, the year 2018, and some basic data fields, and has specified that the results be output to a tab-delimited ASCII text file.

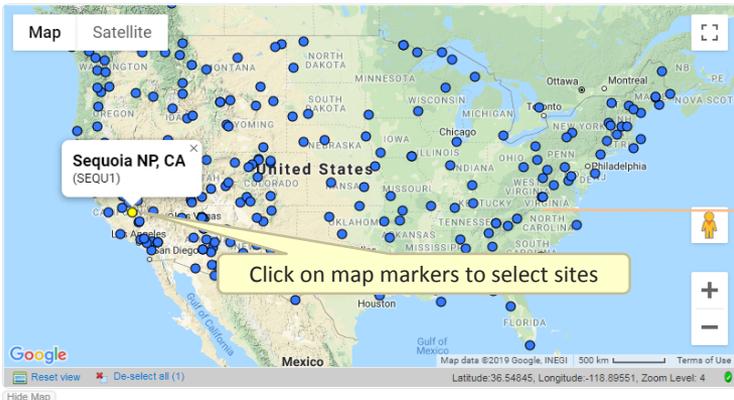

Monitoring Site Browser

Choose a network or dataset

IMPROVE Aerosol

Select a monitoring network

The specific website that this example was taken from

Purpose:

To provide a quick and easy way to browse monitoring sites by air quality monitoring network or dataset. Site details like latitude, longitude, and elevation are displayed, as well as any site photographs that may be available. A high-level summary of the statistics for each parameter measured at the site is also displayed.

Provides:

- Regional haze planning support
- Visibility progress tracking support
- Support for State Implementation Plans (SIPs)
- Support for Tribal Implementation Plans (TIPs)
- Haze analysis tools
- Visibility summaries

Collaborators:

- 15 Western States: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, Wyoming
- WESTAR/WRAP

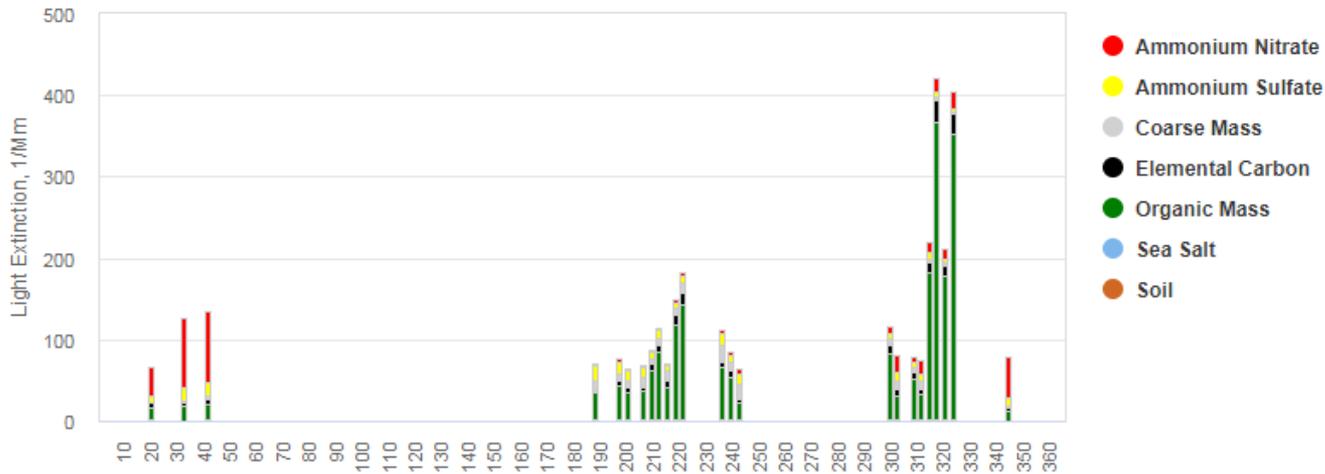

Purpose:
To illustrate the difference between the days selected as the “haziest days” under the previous guidance versus the days selected as the “most impaired days” under the current guidance by sorting the days from a single year in three different ways – chronologically by date, by total haze (previous guidance), and total impairment, shown top to bottom here.

Features:
You can set the year for the report across the entire available record of IMPROVE data, and you can selectively choose the extinction parameters to show on the charts. You can also quickly show and hide individual parameters by clicking the legend items, and you can easily download the raw data used to create each chart in a variety of tabular formats, including CSV and Microsoft Excel.

Daily Extinction Composition, Haziest Days, 2018

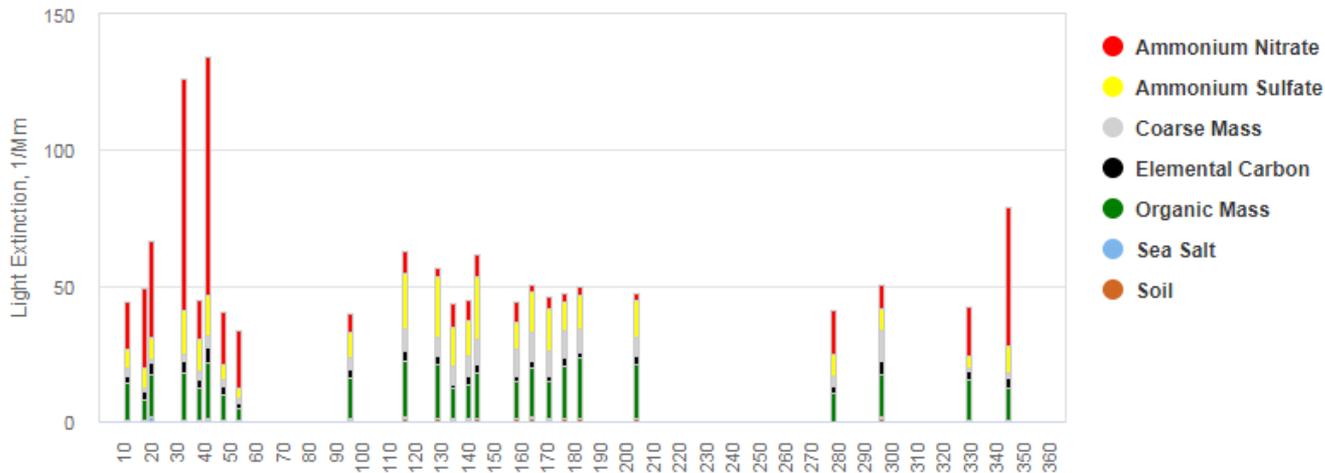

Sequoia NP (SEQU1)

IMPROVE Monitor: SEQU1; Class I Areas: Sequoia National Park, Kings Canyon National Park

Daily Extinction Composition, Most Impaired Days, 2018

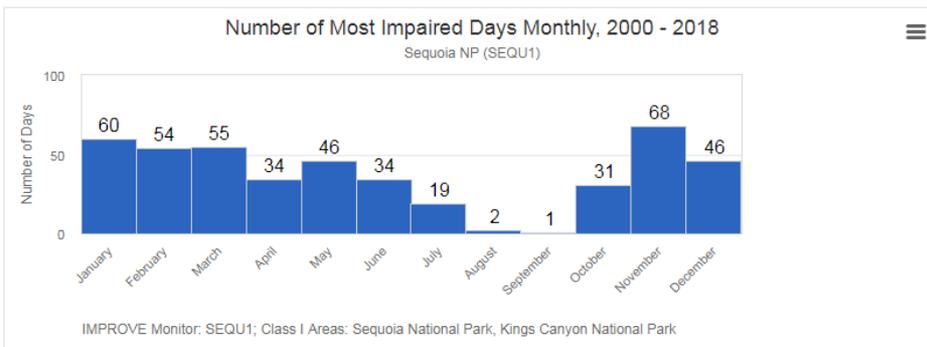

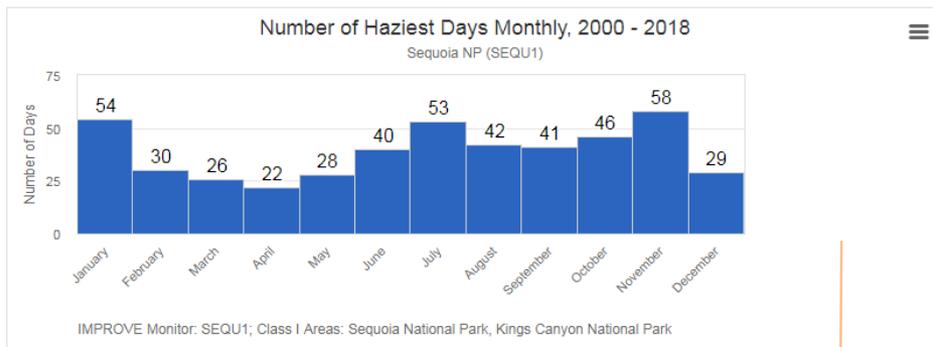

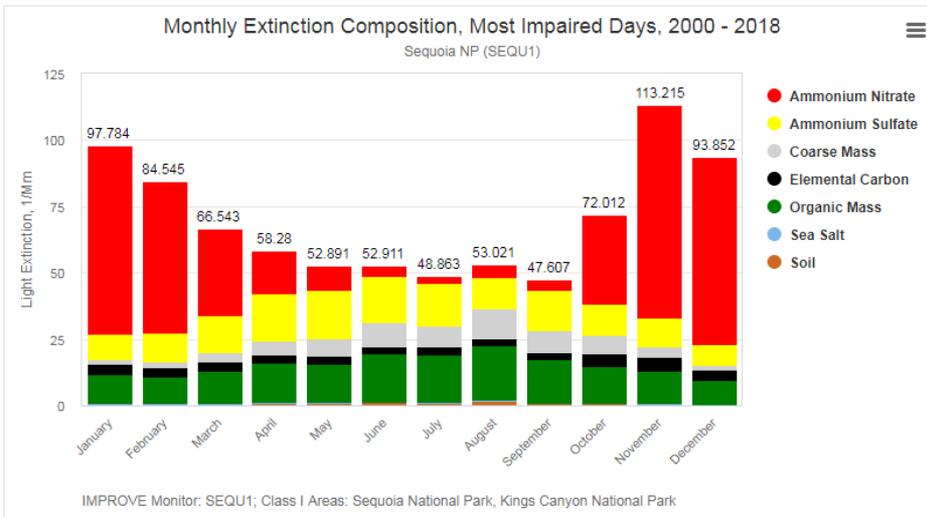

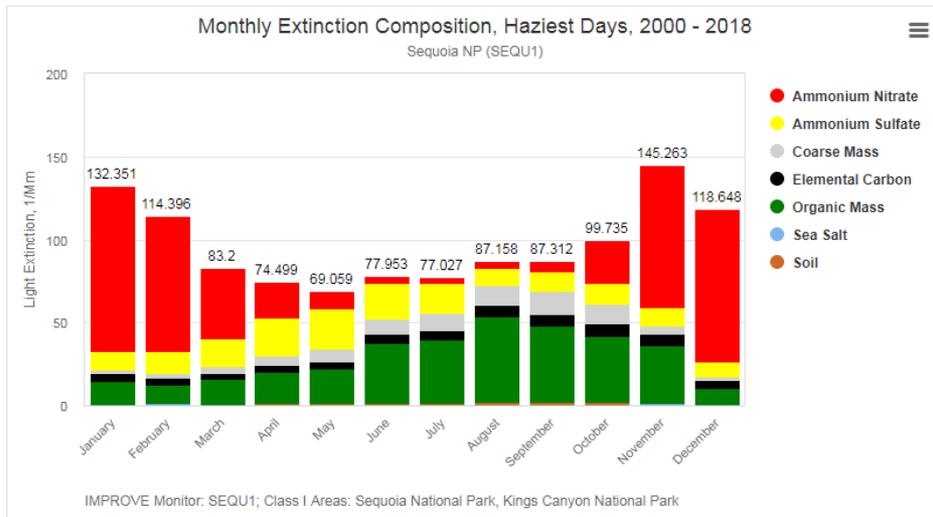

Sequoia NP (SEQU1)

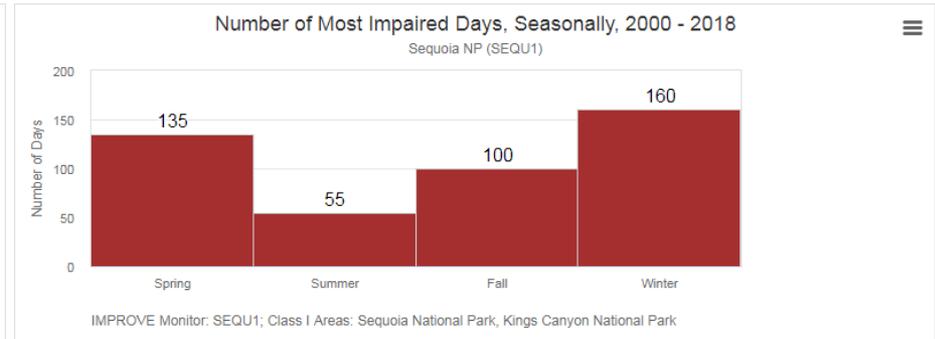

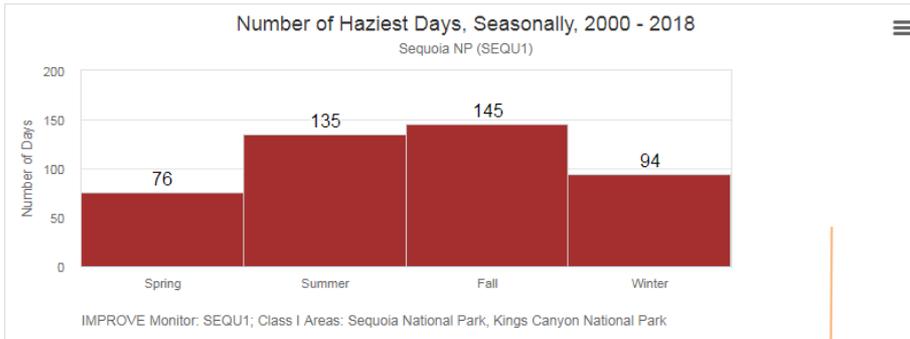

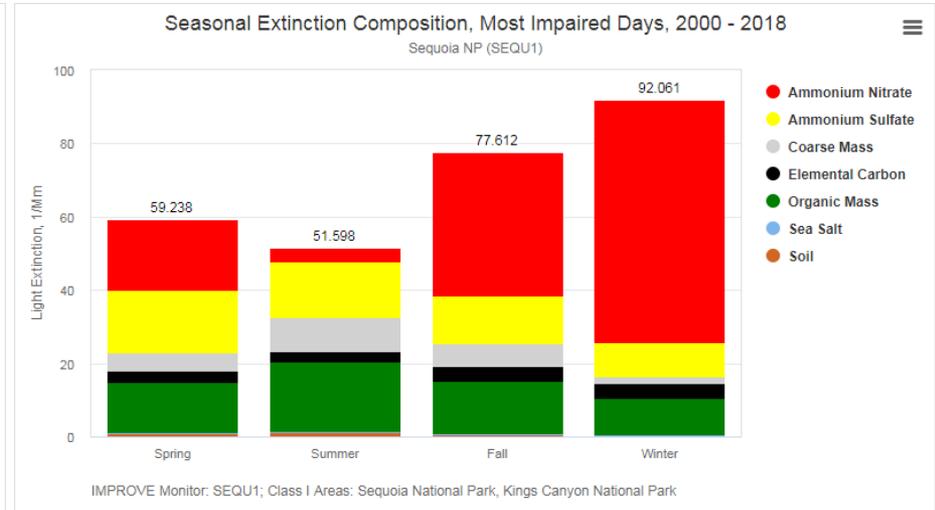

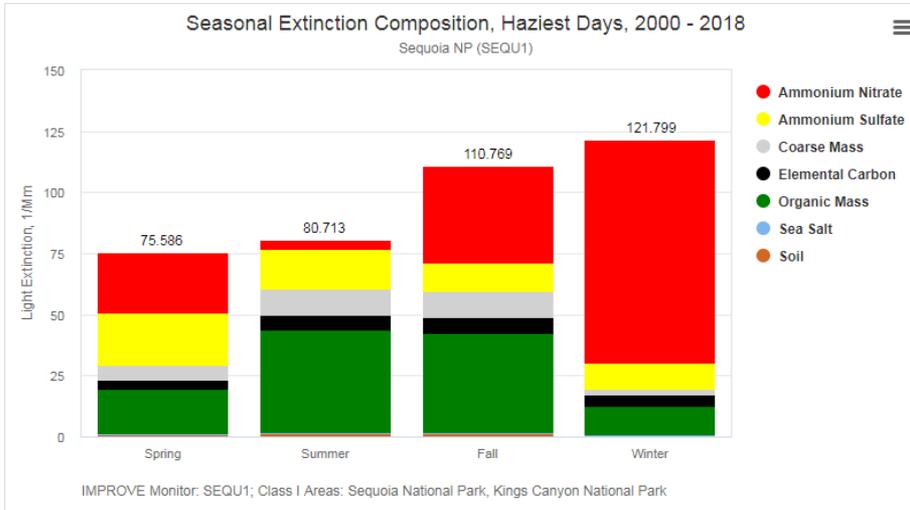

IMPROVE Monitor: SEQU1; Class I Areas: Sequoia National Park, Kings Canyon National Park

Purpose:

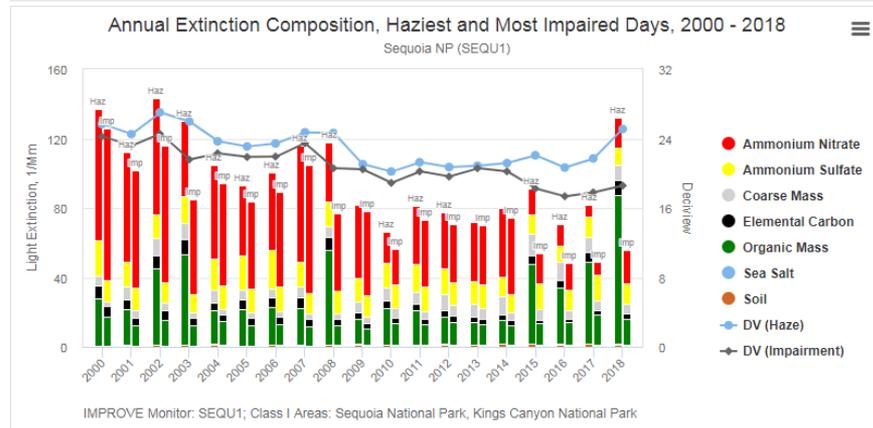

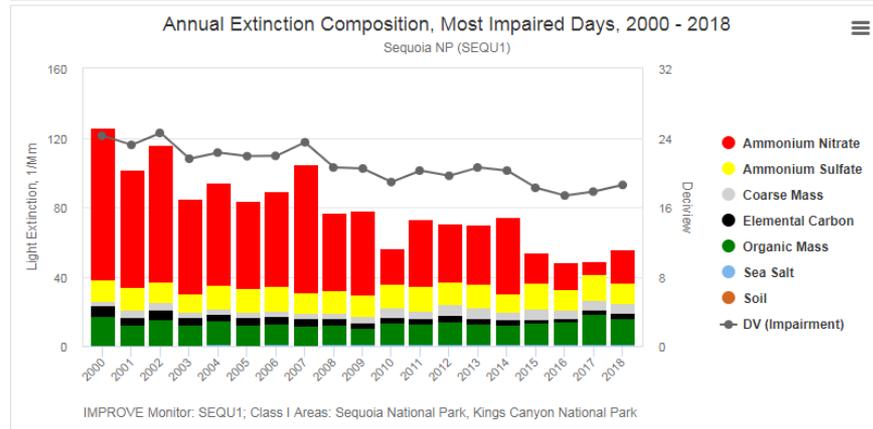

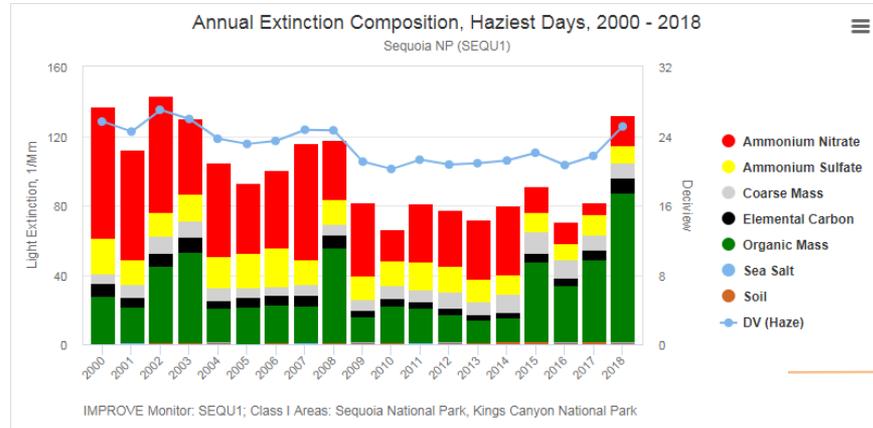

To illustrate the difference between the days selected as the “haziest days” under the previous guidance versus the days selected as the “most impaired days” under the current guidance by showing only those two sets of days – one set on each chart – while excluding all other days.

Purpose:
 To illustrate the effect on monthly extinction composition by the choice of guidance metric applied. The charts in the left column above show monthly extinction composition on the haziest days (top) and the total number of haziest days per month (bottom). The charts in the right column show monthly extinction composition on the most impaired days (top) and the total number of most impaired days per month (bottom).

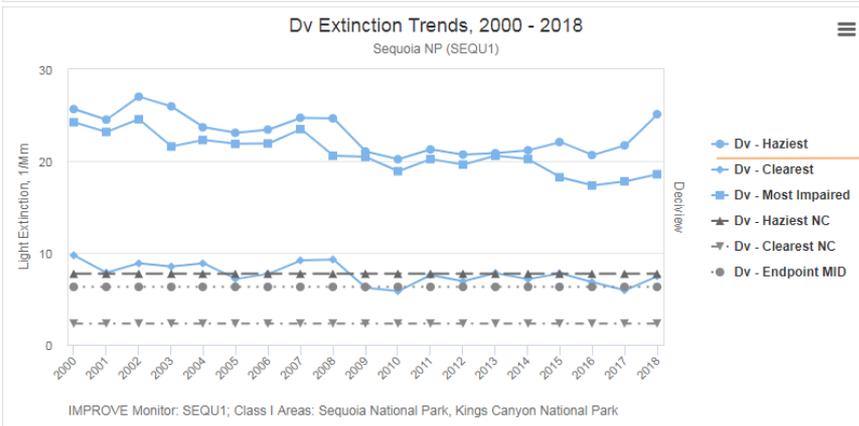

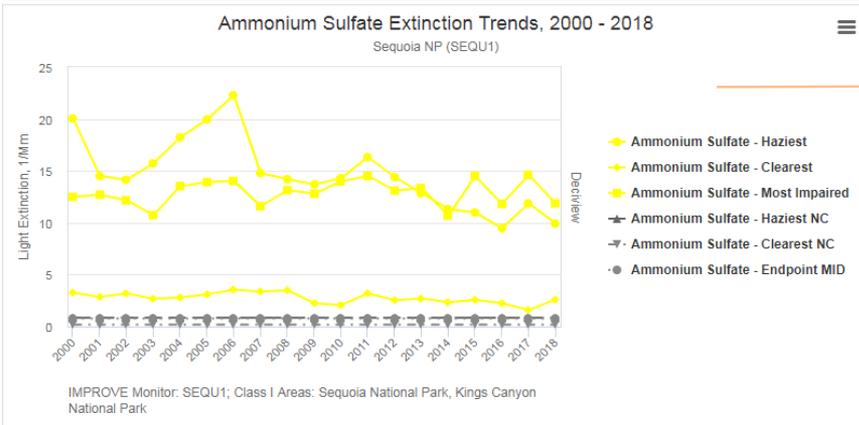

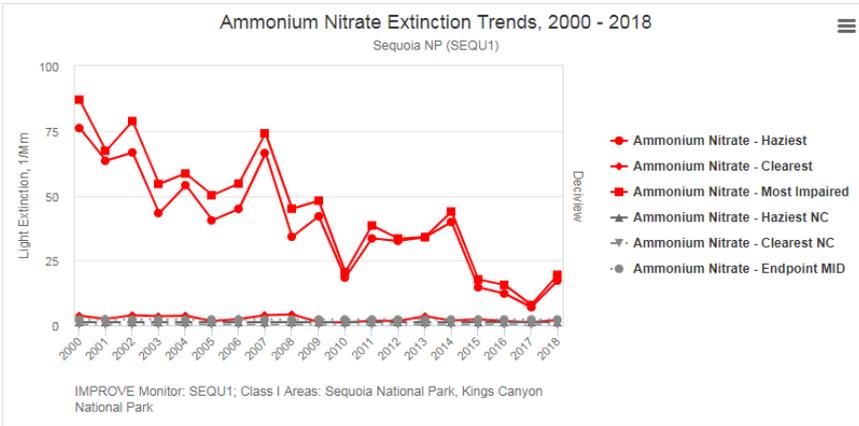

Purpose:
 To illustrate the effect on seasonal extinction composition by the choice of guidance metric applied. The charts in the left column above show seasonal extinction composition on the haziest days (top) and the total number of haziest days per season (bottom). The charts in the right column show seasonal extinction composition on the most impaired days (top) and the total number of most impaired days per season (bottom).

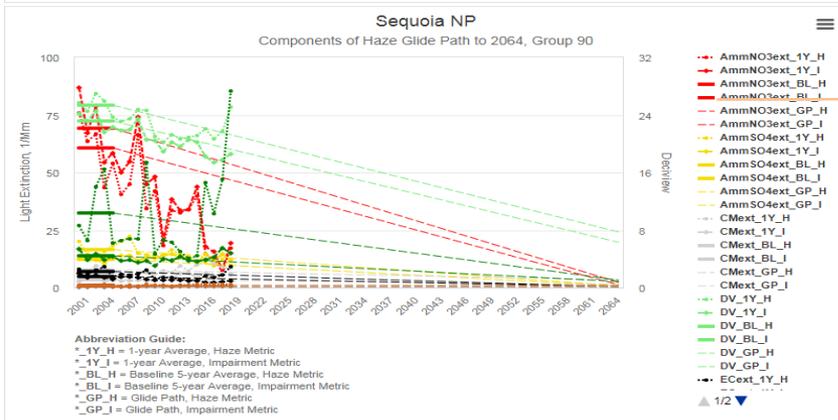

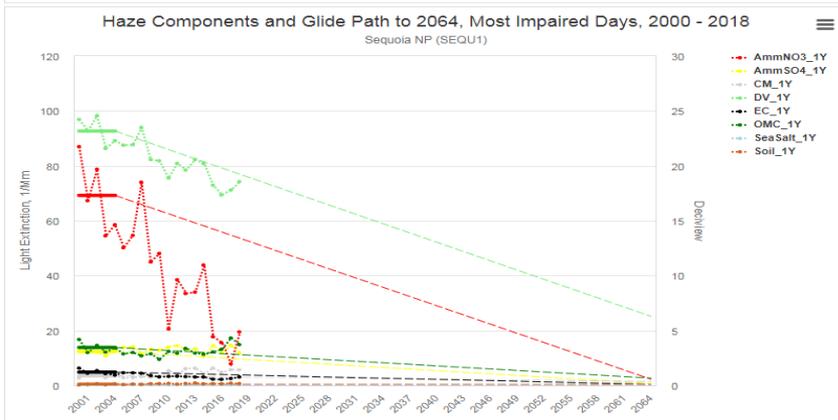

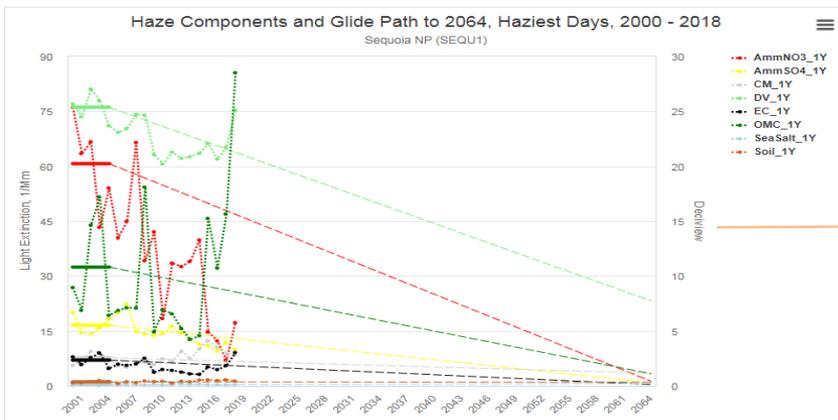

Purpose:

To illustrate the effect on annual average extinction composition by the choice of guidance metric. The top chart shows annual average extinction composition on the haziest days with total haze overlaid as a time series, the middle chart shows annual average extinction composition on the most impaired days with total impairment shown as a time series, and the bottom chart shows the two views combined, with the haziest and most impaired bars arranged side-by-side.

Purpose:
 To illustrate long term trends in annual average extinction composition on the haziest and most impaired days, together with reference lines for natural conditions on the haziest and clearest days, as well as a reference line for the “endpoint” estimate of the current guidance. All seven of the primary extinction parameters can be selected, but only ammonium nitrate, ammonium sulfate, and deciview are shown in this example.

Feature Note:
 To simplify any chart for viewing, you can click on a given entry in the legend in order to temporarily remove the corresponding series from the chart.

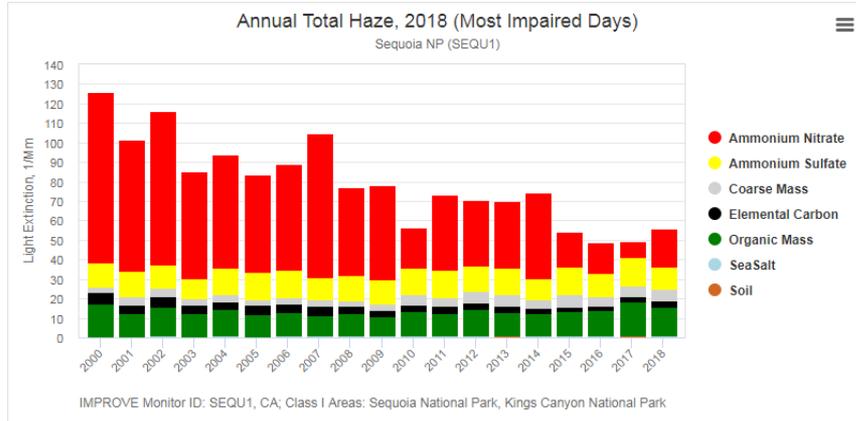

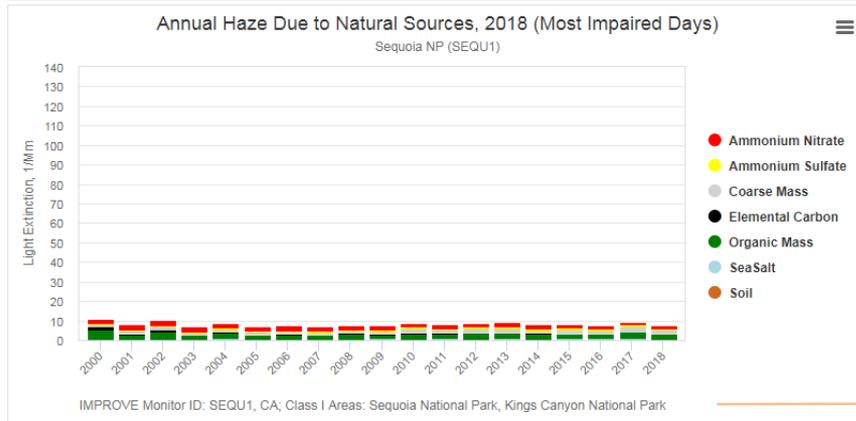

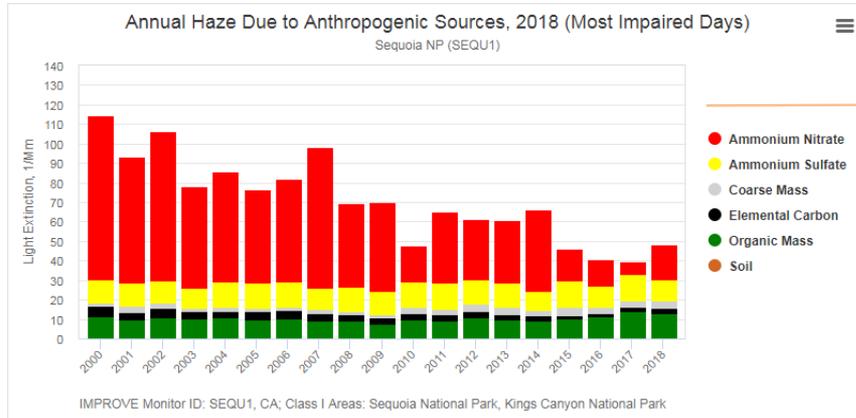

Purpose:

To illustrate the “glide path” or “uniform rate of progress (URP)” line from the first and second baseline periods (2000-2004 and 2005-2009) to natural conditions and/or the “endpoint” for the primary extinction parameters. Annual average extinction is also shown as a time series for each selected parameter for the period of record. The top chart shows the URP glidepath for species extinction on the haziest days, the middle chart shows the same thing for the most impaired days, and the bottom chart combines the two views so that you can more easily compare the haziest and M.I.D. glide paths.

Feature Note:

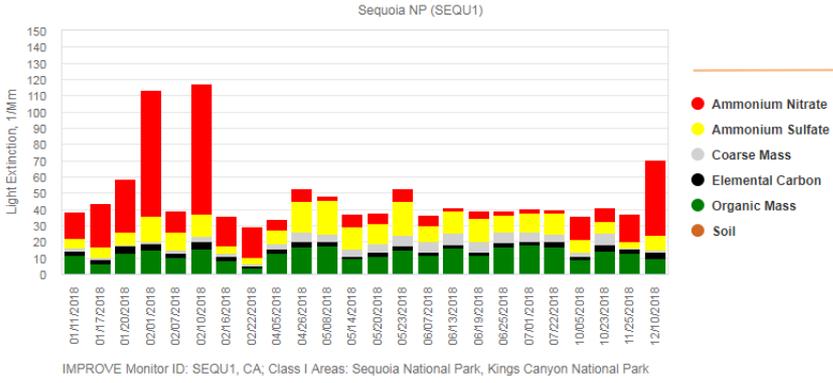

While the all-parameter view of this report is visually “busy”, you can easily simplify each chart by clicking on a given entry in the legend in order to temporarily remove the corresponding series from the chart.

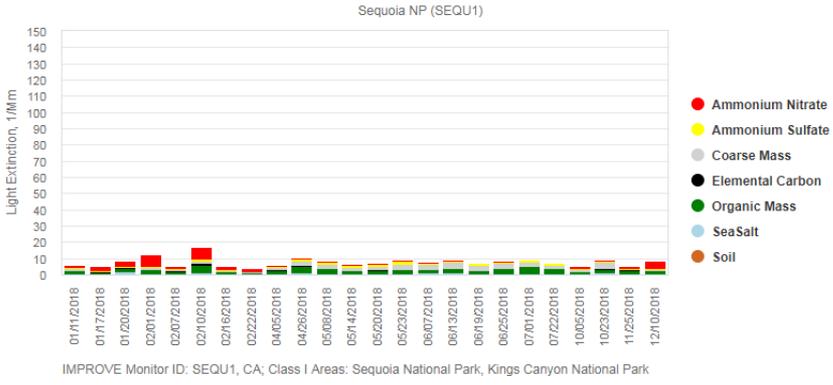

Purpose:
To illustrate and compare annual haze due to anthropogenic sources versus natural sources on the most impaired days. The top chart shows annual average haze for the primary extinction parameters due to anthropogenic sources, the middle chart shows annual average haze for the primary extinction parameters due to natural sources, and the bottom chart shows total annual average extinction (i.e. extinction due to all sources).

Feature Note:
At the bottom of each chart, the Class I Areas for which the selected monitoring site is considered “representative” are shown. Most sites are associated with a single Class I Area, but quite a few sites are considered representative for multiple Class I Areas.

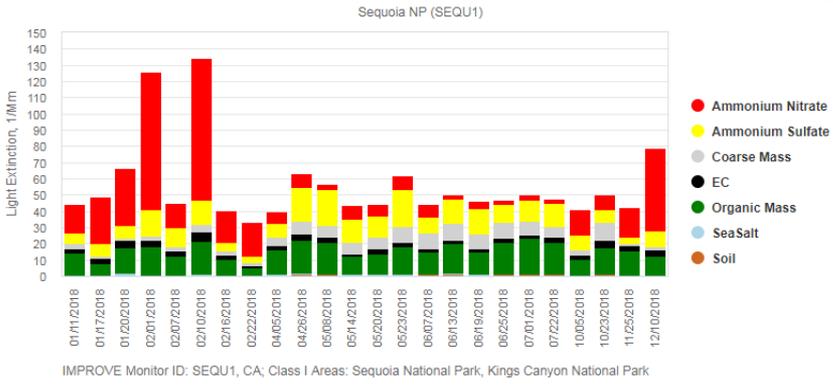

Daily Haze Due to Anthropogenic Sources, 2018 (Most Impaired Days)

Daily Haze Due to Natural Sources, 2018 (Most Impaired Days)

Daily Total Haze, 2018 (Most Impaired Days)

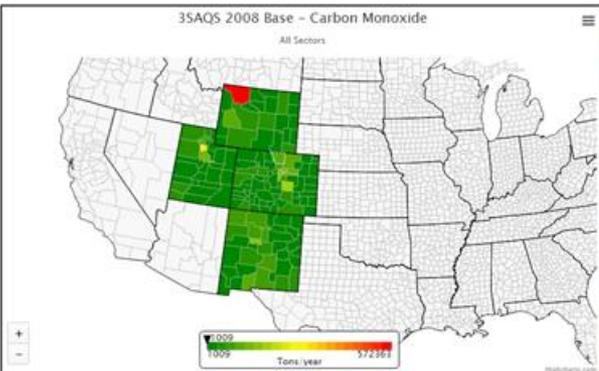

Purpose:

To illustrate and compare daily haze due to anthropogenic sources versus natural sources on the most impaired days. The top chart shows daily average haze for the primary extinction parameters due to anthropogenic sources, the middle chart shows daily average haze for the primary extinction parameters due to natural sources, and the bottom chart shows total annual average extinction (i.e. extinction due to all sources).

Modeling Platform Data Request Form

Notes ^

October 18, 2018

The Intermountain West Data Warehouse – Western Air Quality Study (IWDW-WAQS) is in the process of developing an updated air quality modeling platform for 2014. The WAQS 2014 modeling platform components, as described below, will be reviewed and approved by the IWDW-WAQS Cooperating Agencies. Components are being developed for use in regional air quality modeling studies by the cooperating agencies and for external users accepting the terms of the Agreement and authorized by the Cooperators.

The 2014 WAQS modeling platform is based on EPA's 2014 NEIv2 with updates for emissions sectors affecting regional AQ modeling, particulate matter impact ozone modeling, and PM emissions that may impact modeling for Regional Haze Planning. Base 2014 modeling uses WRF meteorology, precipitation cover/snow depth data and versions of WRF-CAMx and CAMx with specialized dynamical and chemical parameterizations for areas covered by the modeling platform.

Modeling Software ^

Name	Description	Notes	Source	Status
WRF v3.6.1	WAQS 2014 WRF modeling software	NCAR/UCAR WRF.		Pending
WRF v3.8	EPA 2014 WRF modeling software	NCAR/UCAR WRF.		Pending
<input type="checkbox"/> SMOKEv4.5	Processing scripts and emissions inputs used in WRAP emissions processing	CMAS SMOKE. SMOKE processing scripts and input package. Includes all WRAP v1 and updated NEIv2 inventories and SMOKE-ready inputs.		Available
CAMx v6.4				Pending
CMAQ v5.2				Pending

Shows the status of the component

Purpose:

To facilitate the browsing, selection, and download of entire modeling platforms or individual modeling platform components, and to illustrate the expected roadmap for creating and distributing modeling platforms and individual platform scenarios. Platform components can be accessed and downloaded via SFTP, HTTP, and Globus, and extremely large-volume data requests can be delivered on physical hard drives via regular mail service.

+ Show chart data

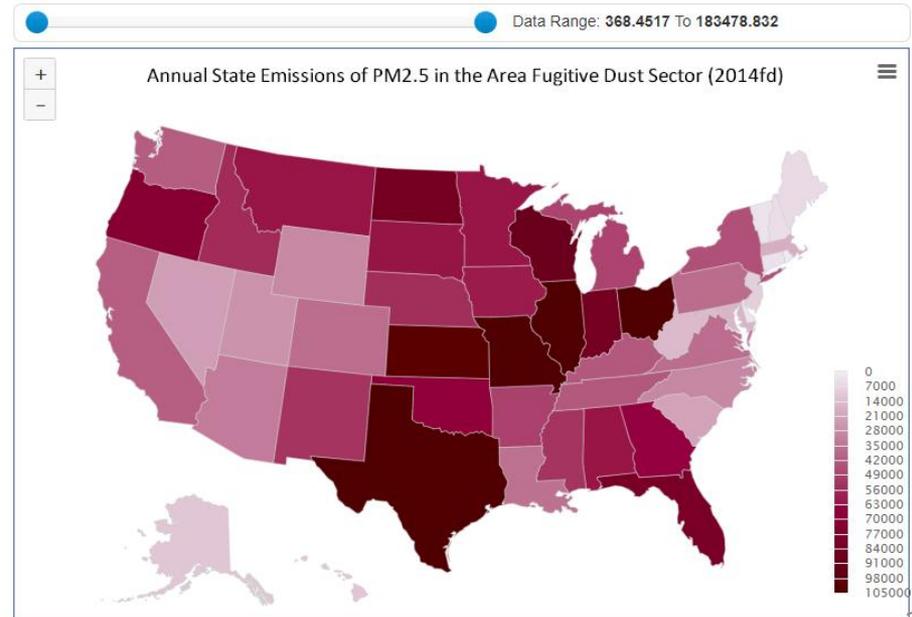

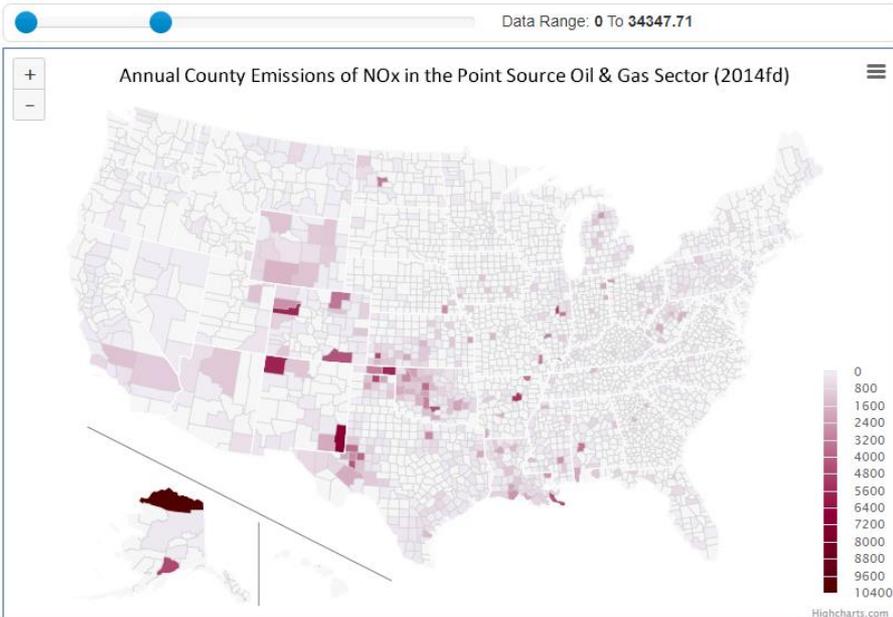

Purpose:
Provides a detailed summary of annual emissions totals by state, county, and source category via a variety of interactive maps and charts. The emissions inventory data used for ten different modeling scenarios is available, and emissions totals from multiple scenarios can be selected and visualized at the same time with multiple side-by-side charts or multiple side-by-side stacked bars on the same chart.

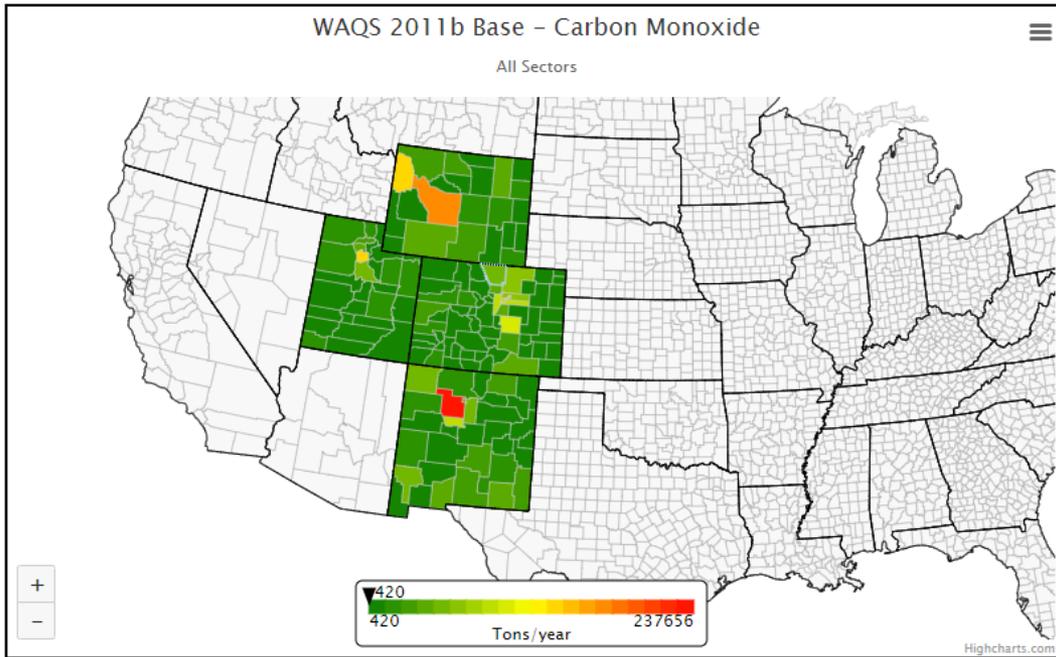

Purpose:

To display state- and county-level annual emissions totals for the selected states, pollutants, and source sectors. You can mouse-over individual states and counties to display more detail, and you can use the “Data Range” slider bars to specify a range of total emissions in tons per year in order to filter out large numbers of low and/or high values and thus change the visual contrast and separation of the map colors.

Status: **Loading images 52%**
Hour: **4** **Animate**

Date: 2008188 Hour: 4 Parameter: AACD Type: avry Layer: 0

Purpose:

Provides an interactive map of gridded data down to the level of individual model days. A series of maps can be animated over a selected time period.

- Finalize the WAQS 2014 modeling platform
 - Emissions summary tables (2002, 2014v2 and RepBase)
 - Dynamic evaluation visibility results at Class I Areas
 - Gridded 2028 OTB a&b emissions
 - Gridded 2028 OTB a&b annual/seasonal concentrations
 - Gridded residence time fields for all Class I Areas
 - Gridded WEP & emissions and point sources
- Finalize the USEPA 2016 modeling platform
- More SIP and TIP development tools and products
 - Add future year model projections to glide path products
 - Create simplified versions of existing tools specific to current guidance
 - Add high-level emissions and modeling results summaries
 - Further streamline the modeling platform data request pipeline
 - Develop additional gridded data display tools
 - Integrate proscribed fire data and associated tools
 - Incorporate satellite data
- Create full failover hardware and data redundancy
- Update and renew the various project agreements
